Summary

Final-year B.Tech Computer Science (AI & ML) student with hands-on experience developing RESTful backend applications using Python, FastAPI, Java, Spring Boot, Spring Security, MySQL, JWT Authentication, and GitHub Actions for CI/CD. Strong foundation in Object-Oriented Programming (OOP), Data Structures and Algorithms (DSA), and SOLID Principles. Looking to contribute as a Software Development Engineer in a product-driven team.

Education

Sreyas Institute of Engineering and Technology **2023 – 2027**
Bachelor of Technology - Computer Science And Engineering (AI&ML); CGPA: 9.06 *Telangana, India*

Experience

Swecha **May 2025 – July 2025**
Intern *Telangana, India*

- Built TextBrief, an end-to-end NLP text summarization tool using Hugging Face Transformer models (BART), delivering context-aware abstractive summaries on long-form input.
- Deployed as an interactive Streamlit web app; demonstrated to 50+ users across internship sessions with real-time inference on variable-length documents.
- Optimized Hugging Face inference pipeline for throughput and summary quality — reduced redundant tokenization steps, benchmarked output against input length thresholds and 88% modal accuracy.

Technical Skills

Languages:	Python, Java, SQL, C
Web Technologies:	HTML, CSS, JavaScript, REST APIs, TypeScript
Java Technologies:	Core Java, Spring Boot, Spring Security, Spring Data JPA, Hibernate, Maven
Databases:	MySQL, MongoDB, Supabase
Tools:	Git, GitHub, GitHub Actions,Swagger UI, Postman, Docker, Vercel
Testing :	JUnit 5, Mockito

Projects

TaskTrackr - Task Manager REST API | *Java, Spring Boot, JWT, MySQL* **Github**

- Built a Java Spring Boot Task Manager backend with MySQL to manage users, projects, and tasks, following a clean Controller-Service-Repository structure for better code organization and maintainability.
- Implemented user registration and login using Spring Security, JWT-based authentication, and BCrypt password hashing, so only authenticated users can access task and project APIs.
- Developed REST APIs for creating, viewing, updating, deleting, searching, and filtering tasks and projects, along with pagination, task status tracking, project-task mapping, and Swagger UI for API testing.
- Added service-layer unit tests using Mockito to validate authentication, task, and project logic.

Smart Blog Editor | *React, FastAPI, MongoDB, JWT, Gemini API* **Github**

- Developed a production-grade full-stack blog platform with React + Lexical rich-text editor frontend and FastAPI backend; secured with JWT auth and MongoDB persistence.
- Integrated Gemini API for AI-assisted content generation with streaming responses; added slug generation, indexed queries, and a DELETE endpoint improving backend completeness.
- Followed clean, modular service-layer architecture with environment-driven configuration and separation of concerns, ensuring maintainable and production-ready Python code throughout the codebase.

Event Verse | *React, TypeScript, Supabase, Stripe* **Github**

- Built a full-stack event ticketing platform with React 18 + TypeScript and Supabase (PostgreSQL + Auth + Realtime), supporting interactive seat map selection with live availability updates via Supabase Realtime subscriptions.
- Integrated Stripe payment processing via a Supabase Edge Function, keeping secret keys server-side; implemented client-side PDF ticket generation using jsPDF with unique booking ID stamping on checkout completion.
- Architected data layer using TanStack Query for caching and optimistic updates; deployed on Vercel with SPA routing config and automatic CI/CD on every push to main.

Achievements

- Secured 1st place out of 300+ teams at HackFest, designing and deploying a full-stack web application under a 24-hour time constraint.
- Organized the SDG technical event and led developer workshops reaching 800+ attendees across multiple sessions, managing end-to-end event logistics.
- Represented college in Cricket, Volleyball, and Kabaddi at competitive inter-collegiate events.
